The Post-Graduate Medical School of the New York University School of Medicine is committed to improving patient care through continuing medical education.

COURSE DESCRIPTION
The Center for Minimally Invasive Plastic Surgery is dedicated to the development and implementation of innovations in surgical technology, minimally invasive procedures utilizing advanced technology, reduced recovery times and improved outcomes.

This course will present a state-of-the-art in-depth overview of facial surgery, breast surgery, body contouring, tissue replacement, and skin care.

TARGET AUDIENCE
This annual two-day course responds to the needs of practicing Plastic Surgeons, as well as Residents and Fellows.

STATEMENT OF NEED
There is a need to fully explore the newest advances in surgical technology and minimally invasive procedures available to plastic surgeons to overcome difficulties in the following: (1) correcting facial contour deformities in a predictable and consistent manner; (2) treating patients who desire improvement in facial appearance with the use of minimally invasive techniques; and (3) correcting the tissue excess that results from massive weight loss after bariatric surgery.

EDUCATIONAL OBJECTIVES
- For patients who present with facial contour deformities, you will develop a treatment plan to correct the deformity in a safe and predictable manner.
- When patients present with facial aging, you will utilize minimally invasive techniques to offer a treatment plan to improve their facial appearance.
  - For patients presenting with a desire to improve their appearance, you will develop a treatment strategy to correct the tissue excess and contour deformities that result from massive weight loss.
