# ADVANCES IN DERMATOLOGY

Thursday and Friday, June 11 & 12, 2009

126 Years of Continuing Medical Education

THE RONALD O. PERELMAN DEPARTMENT OF DERMATOLOGY  
New York University School of Medicine

**Target Audience** This activity has been designated for practitioners who care for people with skin disease, including dermatologists, dermatologic surgeons, and residents in dermatology. The audience appreciates learning via didactic lectures.

**Course Description** A nationally recognized faculty will address important developments in medical, surgical, pediatric and cosmetic dermatology. The symposium strives for an unbiased and provocative perspective on many important topics relevant to practitioners who care for people with skin disease, including dermatologists, dermatologic surgeons and residents in dermatology.

**Statement of Need** Dermatologists applying for dermatologic surgery privileges in hospitals, ambulatory surgery centers, or outpatient clinics should be able to demonstrate appropriate training, competence, and experience in many procedures. Dermatologists must appropriately select patients for either surgical or cosmetic procedures. Training may be acquired through residency training; post-residency training at formal courses; supervised instruction by skilled dermatologists, dermatologic surgeons or other practitioners; and practical experience. Also, there is a growing demand for dermatologists to be competent in the diagnosis and treatment of diseases of the skin. Specifically, fewer dermatologists are able to diagnose complex medical dermatologic conditions and subsequently use both conventional and novel therapeutics that possess greater efficacy and, more importantly, the ability to positively alter the lives of patients with serious cutaneous disease.

### **Learning Objectives**

- Diagnose complex medical conditions and select both conventional and novel therapies that possess greater efficacy.
- Describe new modalities for the treatment of photoaging, including filler substances and the use of lasers and other light sources, and incorporate treatment efficacies during patient selection.
- Evaluate surgical options for the removal of cutaneous malignancies as well as strategies for prevention of reoccurrence.
- Taking into account treatment risk and benefit, demonstrate proper patient selection for both topical and systematic therapies for medical dermatologic disease based on published guidelines.
- Describe psoriasis as a systemic disease, potentially accompanied by many comorbid conditions, and utilize appropriate screening to identify and positively address these conditions.
