Using an Integrated Approach in Evaluating Cardiothoracic Disease
June 26–30, 2006

Purpose Statement
Due to the rapidly evolving technology found in MRI and CT, there is a need for education in new clinical applications, techniques and interpretation. Maintenance of certification requires continued review of essential imaging techniques in all areas of radiology.

Target Audience
This course is intended for practicing radiologists in academic and private practice. It will also have relevance for cardiologists.

Course Description
This course is dedicated to assessing the role of current state-of-the-art CT and MRI scanning for evaluating cardiopulmonary disease. Recent advances in CT technology, coupled with sophisticated imaging processing, have now made cardiac imaging an important method for evaluating cardiac disease, allowing assessment of diseases affecting both the heart and lungs.

The overall purpose of this course, therefore, will be to provide a thoroughly integrated approach to the use of CT and MRI for evaluating cardiopulmonary disease. It will consist of a series of interrelated lectures emphasizing our current understanding of appropriate clinical indications for the use of cardiac CT, including up-to-date assessment of non-invasive imaging of the coronary arteries, as well as assessing diseases of the aorta and pulmonary arteries. Methods for optimizing evaluation of diseases primarily affect the pulmonary parenchyma will also be presented emphasizing both focal and diffuse lung disease. A thorough review of the use of CT for evaluating lung cancer, including the current status of lung cancer screening will also be included as well as the current status of computer assisted detection and diagnosis. Emphasis will also be placed on newer uses of CT technology to allow functional evaluation of heart and lung disease.

Educational Objectives
1. When assessing patients for the presence of cardiovascular disease, evaluate the advantages that each of the cardiac imaging modalities (MRI, MDCT, and nuclear imaging) have to offer and gain insight to more optimally triage patients to each of these modalities when faced with a clinical cardiovascular question.

2. Review the most novel MDCT, MRI, and nuclear imaging techniques to use when assessing patients for the presence of cardiovascular disease and describe normal cardiac anatomy and cardiovascular pathology.

3. When assessing patients who present with acute chest pain, optimize performance and interpretation of studies in evaluating pulmonary thromboembolism as well as the entire spectrum of acute aortic syndromes, with emphasis placed on optimizing CT techniques and reviewing CT findings.

4. When assessing patients with both focal and diffuse lung disease, use both CT and PET scanning in staging and for improved management of lung cancer patients.

Santa Fe
Nestled at 7000 feet in the foothills of the Rocky Mountains, Santa Fe, New Mexico, the “City Different”, is America’s oldest capital city and claims a long history and rich cultural heritage.

Founded as a capital city in 1607 by Spanish explorers, it was once claimed by the Pueblo Peoples, the Spanish Crown, Mexico, and the Confederacy. In 1846, it was ceded by Mexican Federation to the U.S.

Present day Santa Fe is internationally renowned for its contemporary, cosmopolitan sophistication.

Santa Fe is famous for its culture, art, and traditions. It is home to America’s third largest art market, the Santa Fe Opera, world class dining, hundreds of quaint shops, and unlimited outdoor activities.

To reach Santa Fe, you may fly directly into the Santa Fe Airport or fly into Albuquerque, New Mexico and it’s a 55-minute drive. Ground transportation is available from either airport although you may consider renting a car for your week in the area to explore on your own

The NYU organizers have arranged for daily group activities and tours (see page 5 of this brochure for details).

La Posada de Santa Fe Resort & Spa
(www.rockresorts.com)
New Mexico’s only “Leading Hotel of the World” and a member of the RockResort family, La Posada de Santa Fe Resort & Spa reflects the charm and romance of the Santa Fe experience. Accommodations celebrate Southwestern colors and textures with distinctive Pueblo Revival architecture. Architectural Digest featured La Posada de Santa Fe Resort & Spa prominently, with the hotel’s burnt oranges, squash and reds contrasting with the wood-beamed ceilings, leather accents and tile. Balconies, patios and fireplaces complement many of the 157 guest rooms and suites. No two guest-rooms are alike at this resort. The hotel boasts Fuego restaurant (a winner of the AAA Four Diamond Award), the Avanyu Spa including a complete fitness center, outdoor pool, Tewa-inspired spa therapies and classes in yoga, pilates and aerobics.

The location of La Posada de Santa Fe Resort & Spa is just 2 blocks from the Plaza and less than 2 blocks from Canyon Road galleries and restaurants. You will enjoy a stroll downtown to its fashionable boutiques, historical sites and stunning galleries.
