Purpose Statement
There are many recent technological advances in imaging techniques which can be applied in current clinical practice. Maintenance of certification requires continued review of essential imaging techniques in all areas of radiology, including body, thoracic, cardiac and PET imaging.

Target Audience
This course is designed for practicing clinical radiologists.

Course Description
Directed by Alec J. Megibow, M.D., M.P.H., F.A.C.R., this will be NYU's sixth CME course in Snowmass. During this 4 1/2-day meeting, registrants will be afforded an in-depth exploration of imaging findings in abdominal, thoracic and cardiac diseases. Presentations will demonstrate how current state-of-the-art imaging technology and techniques are applied in clinical practice. Again this year, we will include a series of lectures in oncologic diagnosis using PET and PET/CT. For all presentations, the emphasis is on those methods by which the practicing radiologist can harness the power of the latest technologic developments. Lectures emphasize image interpretation, differential diagnosis, pitfalls and review the pathophysiologic basis for imaging findings.

Educational Objectives
1. Use the latest technology available in MR and CT (high-field MRI and dual-energy MDCT), to visualize the enhancements in imaging findings and the clinical role of these new technologies.
2. Translate the advances of the latest cardiac technology, to create and optimize protocols for cardiovascular, thoracic and abdominal applications in the clinical setting.
3. More effectively use various PET-CT and PET principles and applications to evaluate patients presenting with cancer, while integrating the oncologic work-up.

This course is designed for radiologists in academics or private practice.

Course Description
Under the direction of Georgeann McGuinness, M.D., F.A.C.R., this 4½ day course is intended to provide an overview of current state-of-the-art imaging techniques (MR, CT, HRCT, PET and PET-CT) and appropriate protocols that can be applied to a variety of practical clinical situations. Topics covered this year will include: neuroradiology, thoracic imaging and lung disease, pediatric imaging, PET/CT and abdominal imaging. This year’s program will feature a series of lectures on oncologic diagnosis using PET and PET-CT.

Educational Objectives
1. Using evolving MR, CT and PET-CT technology, improve your specificity of diagnosis and triage of therapy for patients with abnormalities of the brain, body, chest and lung.
2. Translating the advances of the latest technology to patient care, develop protocols for neuro, body and chest imaging, by applying up-to-date imaging techniques.
3. When examining the breast, you will improve your interpretation skills with mammography, ultrasound and MRI, based on advanced imaging protocols.
