Educational Objectives

- Participants will determine how to incorporate updated protocols for sub specialty imaging (Abdominal, Musculoskeletal, Neurologic, Thoracic, Cardiac, Breast, PET/CT, Emergency Medicine, Interventional) into clinical imaging practice in order to enable accurate diagnosis.
- Evaluate the most up-to-date imaging protocols with the goal of selecting those that will yield the best images at the lowest possible radiation dose for CT studies (including Abdominal, Thoracic, Cardiac and Pediatrics).
- Plan and protocol the most comprehensive and informative MR studies in the shortest imaging time.
- Recognize image artifacts in all areas of radiology, and determine their technical and patient related causes in order to minimize their occurrence.
- Determine the best ways to incorporate updates on prostate, renal, pancreatic, intestinal and hepatic imaging into clinical practice protocols.
- Discuss the expanded role of core needle biopsy for evaluation of genetic markers in lung cancer.
- Discuss how to integrate various imaging modalities, breast MR, ultrasound and mammography, in order to render a more accurate diagnosis.

Course Format

The course runs for 5 1/2 days, with a combination of didactic lectures and interactive workshops on most days. Pre-registration for workshops is not required. Attendance of the entire course will provide a comprehensive imaging review, including advanced and cutting edge techniques. Registrants may choose to enroll in any combination of individual course days, thereby creating a unique course content tailored to an individual’s distinct interests.

| Day 1: Neuroimage & Interventional Radiology |
| Day 2: Thoracic Imaging & Cardiac Imaging |
| Day 3: Abdominal Imaging & Cardiac Imaging |
| Day 4: Breast Imaging & PET/CT Imaging |
| Day 5: Musculoskeletal Imaging & Pediatric Imaging |
| Day 6: Imaging Safety |

Target Audience

The program is designed for clinical radiologists in either general or specialized practice, and is appropriate for radiologists in training. Familiarity with the fundamentals of CT, MR, PET, and US technology and applications, as well as basic anatomy, is assumed.

Statement of Need/ Course Description

The 30th Annual "Morton A. Bosniak Head to Toe Imaging Conference" offers an intensive 5 1/2 day program reviewing Neurologic, Musculoskeletal, Pediatric, Abdominal, Thoracic, Cardiac, Breast, Emergency, PET/CT and Interventional Radiology. A new symposium will focus on safety and quality issues, including radiation exposure and contrast reactions, crossing all sub specialty areas. Due to the tremendous growth in the science and practice of radiology, it is imperative for radiologists to continually update their skills and gain exposure to advances in the field. Maintenance of certification requires continued review and adoption of essential and cutting edge imaging techniques in all modalities, covering the entire body. In addition, comparative effectiveness research, as it applies to imaging, will be incorporated throughout the course, allowing immediate application to clinical practice, with an eye towards quality, safety, and the trend towards accountable care organizations.

An innovative feature of this course is that individual sections of the program can be attended on a daily basis, allowing course content to be tailored to the unique interests and requirements of each registrant. The purpose of this course is to provide the registrant with an overview of state-of-the-art imaging methods as they pertain to clinical practice, and to introduce advances in the field in terms of imaging technology and disease diagnosis and management.

The course is designed to examine the practical aspects of established CT, MR, US, PET and Interventional techniques, as well as to introduce new techniques and applications for these modalities. Plenary sessions and workshops have been structured to review pathologic processes and image interpretation, and to update the registrant on advanced applications and image analysis.
