The Department of Radiology Presents:

Provided by the NYU Post-Graduate Medical School

General Information

Target Audience

This course is designed for practicing clinical radiologists in academics or private practice.

Statement of Need/Course Description

Radiologists must be aware of the changes and developments in all areas of radiology (MR, CT, US, X-ray) including Thoracic, Breast, Musculoskeletal, Neuroradiology and Pediatric imaging, in order to maintain certification and optimize patient care. It is imperative that radiologists stay up-to-date on the latest imaging protocols and be aware of technological advances and how to incorporate them into their everyday practice. Several important topics to be covered include: imaging of head and neck emergencies, MSK imaging of the hip, practical pediatric emergency imaging of the chest and MSK, US of the breast and lung cancer screening. The essentials presented in this program are meant to be integrated into the participants' practice in an effort to improve their current knowledge, imaging skills and ultimately to improve patient care.

Learning Objectives

After participating in this activity, clinicians should be able to:

- Describe the normal anatomy and pathologic conditions affecting the small structure of the hand and wrist, using MR imaging.
- Develop a strategy to incorporate cross-sectional imaging (CT and MR) for the diagnostic assessment of head and neck emergencies, particularly for preoperative planning.
- Describe the pitfalls and limitations of performing and interpreting a variety of pediatric ultrasound exams, both in the emergent/inpatient and outpatient setting.
- Describe the current recommendations for the interpretation and management of the high risk breast lesion.
