

# POCUS: Point-of-Care Ultrasound for Pediatric Hospitalists and Neonatologists

**Friday, September 12 and  
Saturday, September 13**  
8 am to 5 pm

**NYU Langone Health**  
NYU SIM Center -Bellevue Hospital Center  
462 First Avenue, NY, NY 10016  
C&D Building – 3<sup>rd</sup> Floor

Point-of-Care Ultrasound has emerged as a useful clinical tool. There is strong evidence supporting its use in various clinical settings. Whereas Point-of-Care Ultrasound is well established in some specialties like pediatric emergency medicine and adult hospital medicine, it is yet to become a part of others, such as pediatric hospital medicine and neonatology. This course aims to bridge this gap. The course organizers have selected both diagnostic and procedural applications that would be most useful on pediatric wards and neonatal units in academic and community hospitals. Didactic presentations will be followed by hands-on practice on live models and ultrasoundable mannequins. Diagnostic applications that will be covered in the course include lung, skin and soft tissue, heart and IVC, kidneys, gall bladder and ocular ultrasound. Attendees will practice placing peripheral and central IV lines, assess bladder volume and performing lumbar puncture with ultrasound guidance.
