APPLICATION FOR THE ACCELERATED RESEARCH TRACK
DEPARTMENT OF PSYCHIATRY, NEW YORK UNIVERSITY SCHOOL OF MEDICINE

This application is for the Research Accelerated Track (RAT) of our adult psychiatry residency program. This track is a separate match number from the general adult program, although you may apply to both programs.

This position is for 1-2 residents per year and is designed to allow the maximum amount of time possible for research activities beginning in the PGY1 year, and continuing through the PGY4 year while adhering to ACGME requirements. Participants will be part of the broader NYU Physician Scientist Research Program, which includes this track as well as the Research Development Track (RDT) that residents apply to join during the PGY2 year and is intended for those who have less extensive backgrounds in research and would like to expand their training, or those who are deciding to incorporate research into their careers at a later stage. Participants in the ART program will receive a supplemental stipend and research support throughout their 4 years of residency training.

Eligibility: Applicants to this program must have extensive research experience with at least 1 first author publication (manuscripts that are in preparation or under review will be considered). **MD-PhD applicants who are intending to continue in mostly research oriented careers are strongly encouraged to apply.** Applicants with MD training with extensive research experience may apply, but historically have not been competitive. Please direct any questions regarding your eligibility/suitability for the RAT or DRT or other general questions about this program to the Associate Director of the Research Track: Tanya.Sippy@nyulangone.org.

Interested candidates for the RAT should complete this application by the ERAS application deadline. Applicants chosen for an interview will be invited to interview through ERAS over 2 days: 1) Clinical interview day for the general psychiatry program and 2) a research interview day during which candidates will meet with possible mentors and participate in a seminar and present their work to faculty and department leadership.

Date: _____/_____/_____

1. Name (in full)____________________________________________________ he/him/his___she/her/hers___

2. Current Address___________________________________________________________________________
City/State/Zip_____________________________ Telephone_______________
                Day___________________ Cell___________________

Email_____________________________________________

3. Citizen of the United States? Yes____ No______
   If not, Permanent Resident? Yes____ No______

4. MD/PhD Institution:

5. Thesis/Research Title_____________________________________________________________________  
                                                                                           

6. Dissertation Mentor_______________________________________________________________________  
                                                                                           

7. To complete your application, please send this application along with the following materials in 1 rolling pdf in the following order at the time you submit your ERAS application to Sophia Blanco (Sophia.Blanco@nyulangone.org) and CC: Tanya.Sippy@nyulangone.org:

   1. Your NIH Biosketch. https://grants.nih.gov/grants/forms/biosketch.htm You need not include your scholastic performance. Please list only peer reviewed publications (you may include manuscripts in publication or in review but NOT poster presentations/abstracts).

   2. A brief description (<500 words) of your interest in neuroscience or psychiatric research, and how this relates to your career plan/clinical interests, including percentage of time you envisage spending engaging in research over the long term.

   3. At least 1 letter of recommendation, and no more than 3, that specifically comment on your research accomplishments and potential. They should include a letter from your Ph.D. thesis advisor, if not already provided to ERAS. If this letter was provided in ERAS, no there is no need to re-include it here.
4. A list of faculty members at NYUSoM and NYU Center for Neural Science or other departments (need not be limited to Psychiatry) you would be interested to meet and consider working with. This list will be used to match you with potential scientific mentors at NYU.
