Vascular Function in Young Healthy Women on Oral Contraceptive Pills

Women currently on or about to start taking: Yaz (generics Gianvi and Loryna), Yasmin (generics Ocella, Syeda, and Zarah), Beyaz, and Safyral

Seeking healthy non-smoking women age 21-35 years for participation in an NYU study on the effects of oral contraceptive pills on blood vessel function.

Eligibility: Women who are currently taking or have recently been given a prescription for a drospirenone-containing pill may be eligible.

Study procedures include measuring blood vessel function in the arm with ultrasound and taking 8 teaspoons of blood from a forearm vein. Participation will require 2 visits each approximately 1-2 hours.

Eligible participants will be compensated for their time and efforts. If you are interested to learn more about participation please call 212-263-3136.
