Rusk Rehabilitation at NYU Langone Health is home to one of the largest and most esteemed physical medicine and rehabilitation (PM&R) training programs in the world, and is proud to offer this as an ACGME-accredited Pediatric Rehabilitation Medicine fellowship program.

Fellows have an opportunity to interact with a variety of pediatric subspecialists, to educate students and residents, and to conduct research.

Training at Rusk Rehabilitation means being part of an illustrious tradition that started with the pioneering work of Dr. Howard Rusk, the widely known “father of rehabilitation medicine” and founder of our nationally recognized rehabilitation program. Today, Rusk Rehabilitation at NYU Langone is ranked #1 in New York and among the best in the country by U.S. News & World Report for the treatment of adults and children with disabilities.

This legacy paired with the integration within a world-class academic medical center creates a fertile learning ground for our fellows. As part of a two year pediatric fellowship, they have a unique opportunity to work with an uncommonly diverse patient group: from rehabilitation patients in the New York City area to those with complex cases from across the country and even around the world.

**TRAINING IN THE FULL RANGE OF SUBSPECIALTIES AND CAPABILITIES**

**Clinical Rotations**
- NYU Langone Orthopedic Hospital
- Ambulatory Care Center
- Bellevue Hospital-Outpatient
- Outpatient electives at other NYU Langone affiliate hospitals
