RUSK INSTITUTE OF REHABILITATION MEDICINE
Research Study

If you’ve had a stroke that affected one side of your body and you cannot use your hands as you would like, you may be eligible to participate in a study to examine if practicing joint movements using special devices can help in the recovery of your arm and hand function.

To participate in this study you must:

- Be English speaking
- Agree to complete two testing visits and 12 training visits over 6 weeks
- Have had a stroke on one side of the body.

The study will involve:

- Training with special devices to improve your arm/forearm/hand function.
- Measurement of sensation, strength and function in the arms and hand

If interested, please call the Motor Recovery Lab at 212-263-0344.
