RUSK INSTITUTE OF REHABILITATION MEDICINE
Research Study

If you’ve had a Traumatic Brain injury that affected your attention and emotional regulation, you may be eligible to participate in a study that examines the relationship between attention and emotional regulation and explores novel treatment strategies to improve your brain function.

To participate in this study you must:

- Be English speaking
- Agree to complete 18 visits in a six week period.
- Have had a brain injury at least 6 months ago.
- Have cognitive or emotional difficulties.

You will be compensated for your time and participation.

Please contact the Motor Recovery Research Lab at 212-263-0344.
