Physical Therapy for Lymphedema of the Arm Following Breast Cancer Treatment Research Study

You are invited to take place in this research study:
• if you have lymphedema, swelling of the arm, after treatment for breast cancer
• if you will be receiving lymphedema treatment for the arm
• if you have none of the following conditions:
  o pacemaker
  o certain heart problems and kidney failure
  o clots in the affected arm
  o previous treatment with low level laser therapy for your arm

* * * * * * * * *

What is the research study about?
The purpose of the study is to see if adding Low Level Laser Therapy to a traditional treatment for this condition will improve treatment results.

Study includes:
• two questionnaires and arm measurements
• 13-22 visits for over 13-14 month period (standard of care physical therapy sessions and research related visits); 50% of participants will receive Low Level Laser Therapy treatment
• You will not receive any compensation for your participation in this study
